Good preparation: the basis for success

A forcing schedule makes it easier to plan harvesting. A cultivar chart (see table below) gives a rough indication of the dates when the flowers can be harvested. The dates are approximate. The greenhouse period depends on the forcing method, the time of year, the cultivar and the climatic conditions at the time of forcing. The length of the greenhouse period depends on the forcing method, the time of year, the cultivar and the climatic conditions at the time of forcing. The length of the greenhouse period also depends on the climatic conditions during the cold period and the forcing itself. A forcing schedule makes it easier to plan harvesting. A cultivar chart (see table below) gives a rough indication of the dates when the flowers can be harvested. The dates are approximate. The greenhouse period depends on the forcing method, the time of year, the cultivar and the climatic conditions at the time of forcing. The length of the greenhouse period depends on the forcing method, the time of year, the cultivar and the climatic conditions at the time of forcing. The length of the greenhouse period also depends on the climatic conditions during the cold period and the forcing itself. A forcing schedule makes it easier to plan harvesting.
